EDUCATION

- **Vellore Institute Of Technology** Vellore, Tamil Nadu, India
Bachelor of Technology - Computer Science And Engineering blockchain technology; CGPA: 8.43 september 2021 - june 2025
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Database Management Systems, Object Oriented Methodology

SKILLS SUMMARY

- **Languages:** GO, JavaScript, Python, Solidity, Smart contracts, Html, CSS, SQL, postgresSQL
- **Frameworks:** Tailwind, ReactJs, NodeJS, ExpressJs
- **Tools:** Cosmos SDK, Docker, Jenkins, Docker Compose, Version control, npm, Visual Studio Code, code sandbox, postman, Hardhat, Truffle, Ganache, Remix ethereum ide, Openzeppelin
- **Platforms:** Linux, Windows
- **Development Platforms:** Alchemy, Thirdweb, Webflow, Aragon
- **Soft Skills:** Leadership, Event Management, Time Management

EXPERIENCE

- **Blockchain Backend Developer - DreamzIot (Artiquus Technologies):** 10/02/2025 - Current
 - Developed a custom blockchain with Cosmos SDK and Ignite CLI, supporting decentralized data storage.
 - Built multi-node validator setup for network security, high availability, and efficient consensus.
 - Created custom modules and transactions for domain-specific use cases.
 - Integrated real-time data ingestion via APIs and exposed gRPC/REST endpoints.
 - Extended on-chain capabilities with CosmWasm smart contracts (Rust).
 - Conducted scalability, performance, and security testing in a distributed environment.
 - Tech: Golang, gRPC, Cosmos Sdk, NFT, DAO, Kafka
- **Backend Developer - Elaniti (Artiquus Technologies):** 08/07/2025 - Current
 - Built a multi-tenant backend with NestJS, TypeScript, and PostgreSQL.
 - Designed relational schema for users, tenants, roles, and permissions with TypeORM.
 - Implemented JWT authentication and RBAC using NestJS guards and strategies.
 - Developed REST APIs and modular architecture to support tenant-specific logic.
 - Ensured backend security, data validation, and maintainable code practices.
 - Tech: Typescript, NestJs, Auth0, JWT, Postgres, DB management
- **Backend Developer - Cybersecurity (Artiquus Technologies):** 08/07/2025 - Current
 - Developed and maintained secure backend systems using Go, implementing gRPC APIs for efficient inter-service communication.
 - Implemented policy-driven Secure vault for storing assert secrets.
 - Applied privacy measures and access controls to ensure compliance with best practices for sensitive user information.
 - Created a new parsing language for parsing policies to vault policy engine.
 - Ensured backend security, data validation, and maintainable code practices.
 - Tech: Golang, gRPC, cryptography, vault, kafka

PROJECTS

- **Blockchain Computing:**
 - Built a decentralized web application on Ethereum to enable global transactions with Merkle Tree-based verification.
 - Developed and deployed smart contracts using Solidity and Hardhat for transaction handling and DAO functionality.
 - Implemented a basic DAO allowing users to create proposals and vote.
 - Enabled on-chain file storage for secure and immutable data access.
 - Integrated MetaMask, with a full-stack setup using React, Node.js, and Express.
 - Technologies used: Blockchain, Ethereum, Hardhat, Solidity, Smart Contracts, React, Node.js, Express, APIs, OpenZeppelin, MetaMask.

CERTIFICATE

- Complete Machine Learning and Deep Learning in python. ([Certificate](#))
- Image Processing and Computer Vision with python and OpenCV using haarcascades. ([Certificate](#))
- Certified AWS Cloud Practitioner. ([Certificate](#))
- Azure Cloud. ([Certificate](#))
- Full stack development with web3. ([Certificate](#))
